What is Smart Solar?

Our Smart Solar bundle is designed for customers looking to reduce their energy bills, cut carbon emissions, and take control of their home's energy. Whether you're thinking about switching to electric heating or simply want to generate your own power, Smart Solar gives you a complete solution.

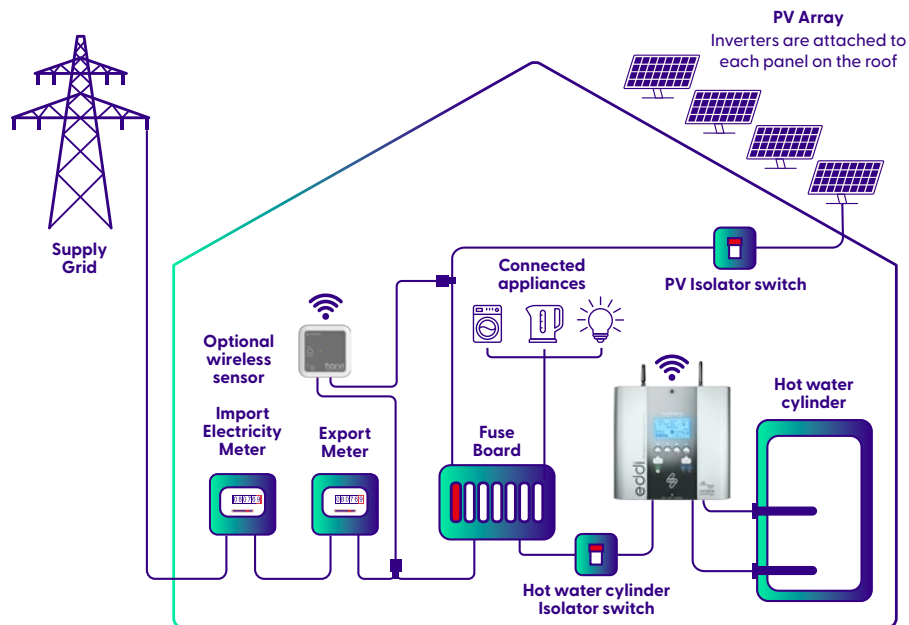

Maximise Your Solar Use

The best way to get value from solar is to use the energy you generate. Our system is designed to help you do just that.

Key Benefits:

- Save on energy bills by using power generated on your roof.
- Power your home and heat your water with clean, renewable electricity.
- Monitor and optimise your energy use with the Myenergi and Enphase apps.
- Export excess power to the grid and get paid through our Green Export Guarantee.
- Reduce your carbon footprint and increase your self-sufficiency.

The myenergi eddi device diverts any excess solar energy into your hot water cylinder, so you're not wasting electricity. You'll also power appliances, lighting and more throughout your home. Surplus energy you don't use can be exported to the grid.

For illustrative purposes only. This is not an installation drawing.

Earn from Excess Energy

With our Green Export Guarantee (GEG Domestic tariff), you get paid for the renewable electricity you export to the grid. So even when you're not using all the energy you generate, your system is still working for you.

Our Technology

We've partnered with industry leaders **Myenergi** and **Enphase** to deliver the very best in home solar tech.

- **Micro-inverters (Enphase)** are installed under each panel to convert sunlight to usable electricity independently. Shading on one panel won't affect the others.
- **Solar diverter (Myenergi eddi)** sends spare energy to heat your water.
- **Myenergi app** to monitor, control and optimise your system.
- **Enphase app** to track individual panel performance and energy production.

What's included?

Every Smart Solar installation includes:

- Rooftop solar panels and mounting
- Enphase micro-inverters
- Myenergi eddi solar diverter
- Full installation by trusted local partners
- Comprehensive warranties across all components
